Class: International

Lecturer: Rizky Muhammad Sidik, S.Pd., M.Ed.

Summary of holistic health and individual fitness level

Health is interpreted as physical well-being, spiritual well-being, and social well-being, which means not only being free from disease, disability, or weakness. Definition of Holistic Health is health as a whole, with all its unique perspectives, including biology, psychology, social, cultural, economic, spiritual, and so on. WHO (2010). The Dimensions are Physical health means having a healthy and fit body. Social health means being able to build good relationships with others. Mental health means feeling happy and content, being able to adapt, and engaging in meaningful activities.

Holistic Health Services including Preventive disease is essential for maintaining good health. This is the most important first step in maintaining good health, as the saying goes, "prepare an umbrella before it rains". Second, Promotional is Efforts to improve the quality of health. This involves promoting healthy lifestyles and raising awareness of the importance of maintaining good health through various health programs and campaigns. Third, Curative is the effort to cure a person of a physical or mental illness. Fourth, Rehabilitative is the process of restoring health and fitness. This includes the recovery process after illness or injury to restore bodily functions and improve quality of life.

Global Health Problems are 1 in 4 Adults do not meet the recommended levels of physical activity, More than 80% of the world's adolescent population is physically inactive. This indicates a health crisis among young people that could have long-term consequences. Indonesians top list of mobile phone users with the highest screen time, spending 5.7 hours a day.
